SUMMARY

Frontend Developer with more than 2 years of work experience and 1,5 years of studies. Proficient in HTML5, CSS3, TypeScript, React and applications testing, I have a deep understanding of modern web development practices and tools. I am looking for a full-time position as a frontend engineer and open to possibility to develop as a full-stack.

WORK EXPERIENCE

Frontend Developer | Vidispine AB

December 2021 - ongoing | Stockholm, Sweden

- Spearheaded the maintenance and development of a dynamic single-page application utilizing React and TypeScript alongside a Node.js (NestJS) proxy Backend for Frontend layer.
- Collaborated closely with the design team to consistently refine and elevate UI/UX standards.
- Ensured consistency and efficiency across the application's UI by using Material-UI library
- Elevated test coverage by over 60%, implementing comprehensive unit, integration, and functional testing protocols.
- Integrated SonarQube to monitor and enhance code quality across the application, ensuring optimal performance and maintainability.
- Boosted performance by seamlessly transitioning an Angular application to React, resulting in improved efficiency and user experience.
- Successfully interfaced with REST APIs from multiple services, enhancing both UX and developer productivity by integrating Tanstack React Query for streamlined data retrieval.
- Optimized the development workflow through the strategic implementation of reusable components and hooks following the principles of atomic design, thereby enhancing efficiency and scalability.
- Actively participated in Scrum activities including Sprint Reviews and Backlog development utilizing Azure DevOps, ensuring alignment with project objectives and timelines.
- Played a pivotal role in onboarding new developers, facilitating smooth integration into the development team and project workflows.
- Led the architecture and development of a cutting-edge frontend SPA built with React and TypeScript utilizing Vite for tooling, further optimized with AWS CloudFront/S3 static website hosting for enhanced performance and scalability.

PROJECTS

Filmoteka [HTML5, CSS3, JavaScript] [link](#) 2021
Website for creating a personal library with popular movies.
(Teamlead)

Phonebook [HTML5, JavaScript, React, Redux] [link](#) 2021
App with user authentication and possibility of making own contacts list .
